

Knuth and Gingerbread Appreciation Club: making advanced mathematics fun

Sergey Kolonitskii

We present a report on progress, status and prospectives of an extracurricular activity dubbed "Knuth & Gingerbread Appreciation Club", established in fall semester of 2023. The activity is a reading club based on Donald Knuth's "Art of programming". The club has managed to operate for four semesters, which can be viewed as a preliminary success. We are going to discuss in detail KGAC's its operating practices, its prospectives, and prospectives of such a format in general.

As KGAC is envisioned as a publicity measure as well as an educational activity, we also discuss promoted core values and ways of their signalling.
